

Megaplex 20 - The District

South Jordan, UT
Spring 2006
Geofoam Void Fill for
Stadium Seating
340,000 Cubic Feet

Application:

340,000 cubic feet of EPS 15 Geofoam was installed as a light weight void fill for stadium seating at the Megaplex 20 movie theatre in South Jordan, Utah

Project Details:

Architect:

Jose Sanchez
FFKR Architecture

Contractor:

Travis Young
Sahara Construction

Summer 2006, contractors utilized EPS Geofoam at the Megaplex 20 as void fill for the theatre's stadium seating. The Geofoam blocks were precut and easy to install. Three inches of concrete covered both the front and top of the EPS Geofoam blocks.

ACH Foam Technologies labeled the blocks and included layout drawings to make installation easy. Very few modifications were needed on the jobsite which helped to speed construction time and save labor costs. The entire theatre features a total of 5,594 seats, with the largest auditorium seating 590 people.
