

Moran Eye Center

Salt Lake City, UT
Summer 2006
Geofoam for Green Roof &
Landscaping
138,000 Cubic Feet

Application:

138,000 cubic feet of EPS 12 Geofoam was installed in the plaza area of the Moran Eye Center in Salt Lake City, Utah. The EPS Geofoam was used as a light weight fill in a green roof and landscaping application.

Architect:

Richard Gilbert
G Brown Design

Contractor:

Brian Hobbs
ACE Landscape /
Layton Construction

Project Details:

Summer 2006, engineers needed a light weight void fill material to reduce the weight of the plaza on a below-grade parking structure. EPS Geofoam helped to reduce 3 million pounds of weight on the parking structure and provided a flat, level surface for the plaza's landscaping. Below the landscaping, 12 feet of EPS Geofoam was used in the Moran Eye Center project.

EPS Geofoam was used in this project because of its light weight, high compressive strength and speed of installation.
