

Peoria Medical Building

Peoria, IL
January 2008
Foundation Stabilization
1,864 Cubic Feet

Application:

1,864 cubic feet of EPS 15 Geofoam with Perform Guard termite resistance treatment was used as foundation stabilization at the Peoria Medical Building in Peoria, Illinois.

Engineer:

Rick J. Anderson
Maurer-Stutz, Inc.

Contractor:

Steve Aupperle
Aupperle Construction

Project Details:

January 2008, engineers for the medical building were seeking a solution to reduce the lateral load on the north side of the building's external foundation. After attending an ACH Foam Technologies' presentation to learn more about alternative void fill solutions, engineers selected Geofoam for its light weight, high strength and resistance to termites.

Geofoam's light weight, quick and easy installation saved time and money. Geofoam has been used as a light weight, high strength void fill in the US for over 30 years.
