

Plumas National Forest

Oroville, CA
October, 2007
Geofoam Road Stabilization
59,400 Cubic Feet

Application:

59,400 cubic feet of EPS 29 Geofoam was used as hillside road stabilization in the Plumas National Forest, in Oroville, California.

Project Details:

Architect:

US Dept. of Agriculture,
Forest Service

Contractor:

Myers Earthwork
Jake Myers

Fall 2007, the US Department of Agriculture, Forest Service specified Geofoam for its light weight, high strength. EPS Geofoam ranging from 9 feet to 15 feet high was installed during roadway repair to stabilize the hillside adjacent to the road where soil erosion and sliding was an ongoing problem.

The United States Forest Service was able to successfully repair the roadway and divert mountain run off underneath the road through a system of culverts by using EPS Geofoam to stabilize the hillside.
